Server

Client

response

request

`http://localhost:3000/concerts.html`

Server

Client

response

request

`http://localhost:3000/concerts.html`

GET Request

Asks for: resource

Expects: that resource back as a response

A GET Request in Express

```
app.get('/', (request, response) => {  
  })
```

path as a string

A GET Request in Express

```
app.get(' / ', (request, response) => {  
  }  
)
```

path as a string

inline callback function

Express Route

Function that determines how an app responds to a certain **request path**.

response.sendFile Signature

```
app.get('/concerts', (request, response) => {  
  response.status(200).sendFile(filePath)  
})
```

path to file on your server
